

# Ortho Eyes

**Tony Andrioli**

- Kasper van der Hoofd
- Vincent van den Oord
- Rogier Zitman
- Luke de Keijzer

# Where are we now?

# Summary: What have we done last week

- We have cleaned and split all data

This took quite long (3-4 days)

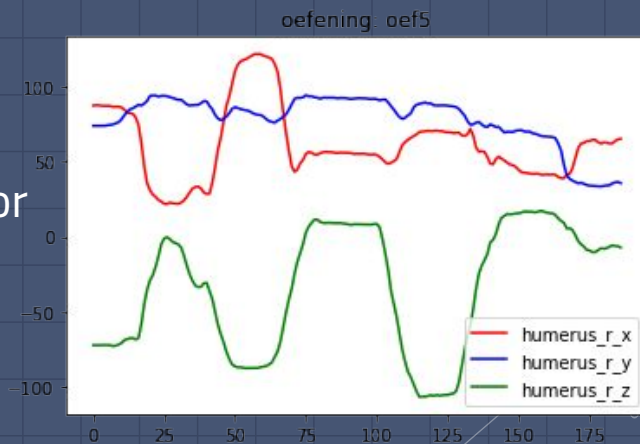

# Summary: What have we done last week

- We have cleaned and split all data

This took quite long (3-4 days) because:

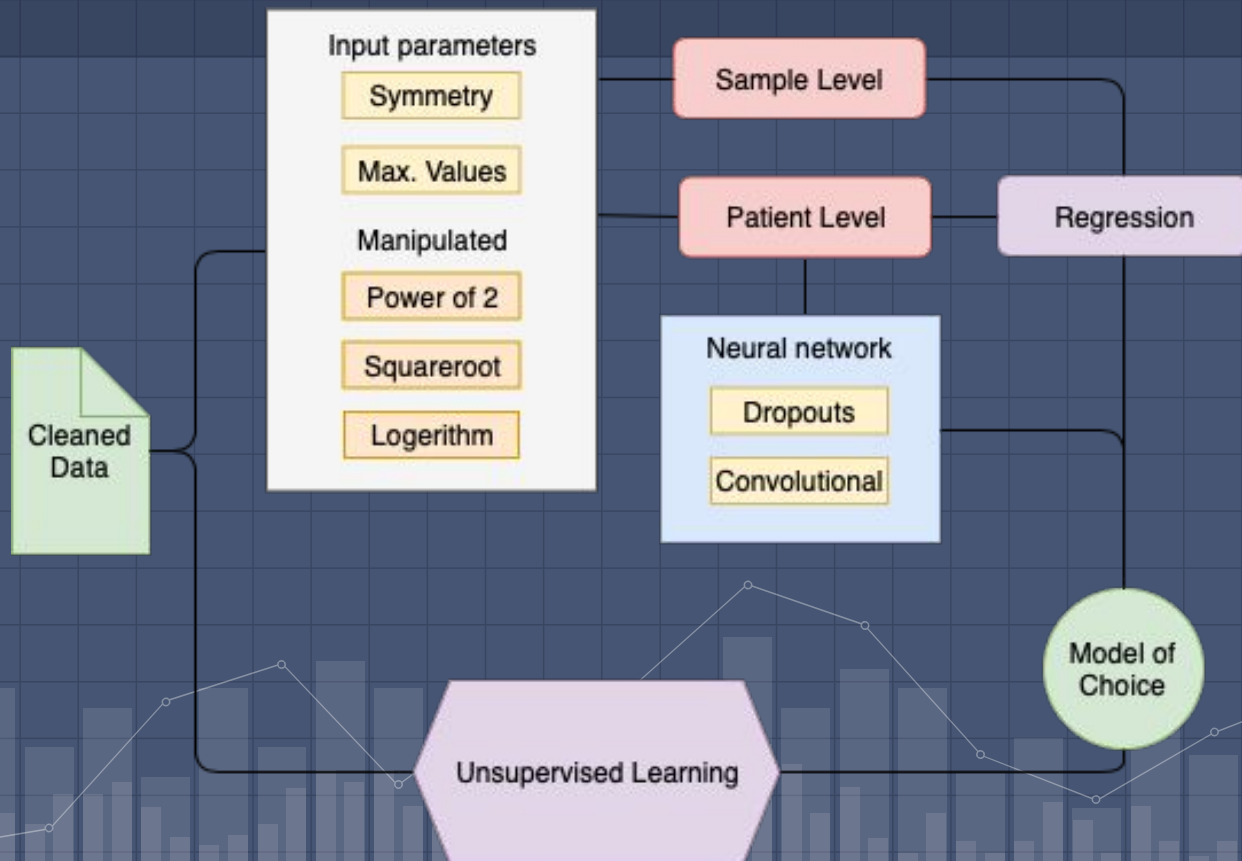

- The cleaning and splitting script contained an error
- We had to check and clean lots of measurements that had been splitted

# Summary: What have we done last week

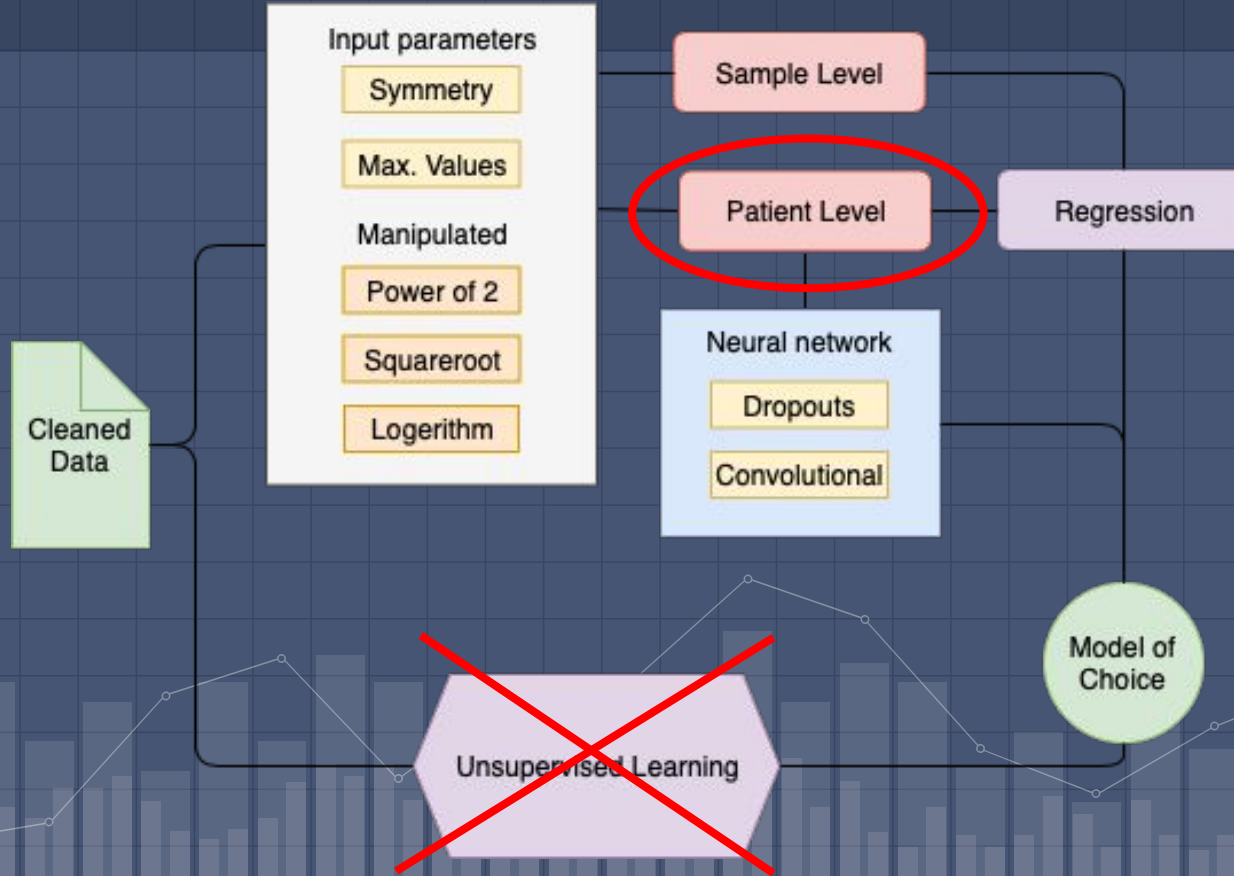

- We have cleaned and split all data
- We discussed how we should write the research paper (and what we should do next)
- We discussed and made an planning for the last 2-3 weeks
- Calculate the energy per exercise (surface area) (and using it as a parameter)

# Planning global planning

# Planning global planning

7

# Our planning for this week

- Identifying the categories
- Compare the same exercises over different categories
- Retrain classifiers with new super cleaned data (and new parameters)
- Continue writing the research paper

**Any questions or suggestions?**
